SITUATION SUMMARY

Public health and medical (EF-8) Situation Report Ebola Virus Disease, 2014

Date of report: [October 10, 2014](#)

Operational period: [October 8 - October 10, 2014](#)

CDPH/EMSA

There are currently no suspected or confirmed cases of Ebola in California. A patient in Los Angeles County was diagnosed negative for Ebola Virus Disease (EVD), on October 9th, 2014, and is being monitored for the next 21 days due to possible Ebola incubation. **At present, the weekly situational assessment for the risk of Ebola infection in California is very low.**

The outbreak of Ebola Virus Disease (EVD) in the West African nations of Guinea, Sierra Leone, and Liberia continues to expand but does not pose a significant risk to the United States. As of September 28, the World Health Organization has reported a cumulative total of 8033 suspect, probable, and confirmed cases and 3865 deaths. Based on the current situation in West Africa, the Centers for Disease Control and Prevention (CDC) considers the risk of importation of multiple cases of EVD into the United States to be very low. However, the outbreak is evolving, and this assessment may change.

A patient with confirmed EVD, diagnosed on September 30, 2014, in Dallas, Texas died on October 8th, 2014. This was the first travel-related case detected outside of West Africa's outbreak region.

The CDC, California Department of Public Health (CDPH), and Emergency Medical Services Authority (EMSA) continue to prepare for the potentiality that a traveler returning to California from West Africa may be infected with Ebola virus.

CDPH continues to work with the healthcare community and local health jurisdictions to identify potential suspect cases and avoid spread of the disease. New guidelines and updated guidelines released by CDC are posted on the CDPH Communicable Diseases Emergency Response (CDER) website available at: (<http://cdph.ca.gov/programs/cder/Pages/Ebola.aspx>). Likewise, EMSA has developed guidelines for Emergency Medical Services (EMS) personnel based on the recommendations of CDC. The guidelines have been distributed to Local Emergency Management Services Agency (LEMSA) Administrators, LEMSAs Medical Directors and the Regional Disaster Medical Health Coordination (RDMHC) Programs. Revisions will be made as necessary. The document is posted on EMSA's website at http://www.emsa.ca.gov/ebola_control.

Cal EOC Incident – 2014 Drought

- SOC / Inland REOC remains activated in support of 2014 Drought

WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

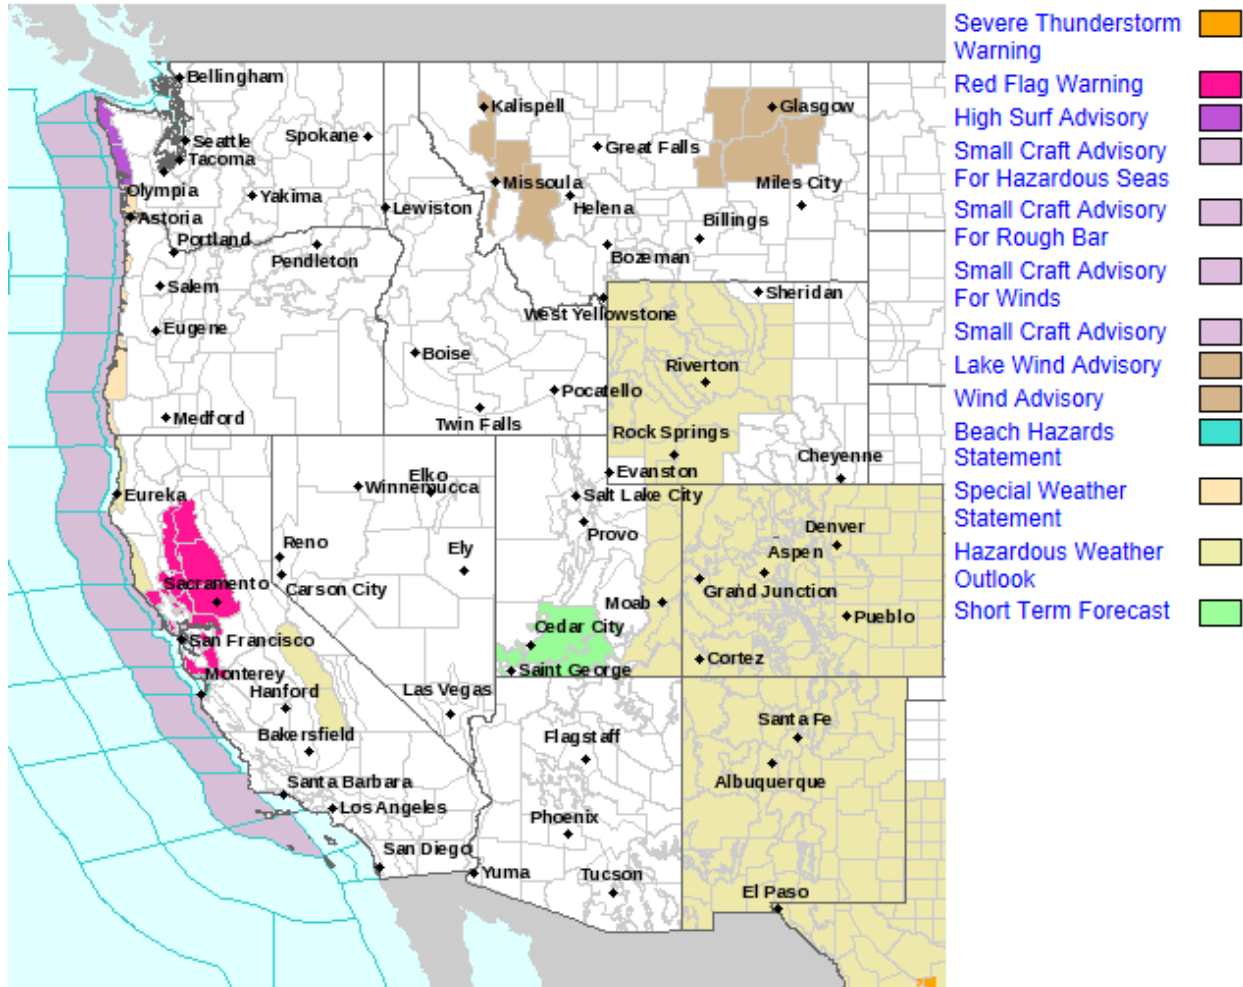

High pressure will be the primary weather pattern again today through the weekend, leading to well above temperatures and very dry conditions. North to East winds will develop Saturday night and become quite strong Sunday. Wind speeds of 10-22 mph with gusts 30-40 mph will be possible. This will help keep weekend temperatures warm (90's inland) and humidity quite low (afternoon relative humidity 8-12% in driest locations Sunday, poor to moderate overnight recovery). Monday the high will shift eastward as a low pressure trough approaches the coast. It is likely to bring some precipitation to the northwest corner Monday night, then further inland during the day Tuesday. All areas will see substantial cooling (as much as 10-12 degrees) and an increase in humidity Tuesday. Snow levels are likely to drop to around 5000-6000ft. in the north, but not much accumulation is likely at those elevations. Low pressure will remain the rest of the week with cool, moist weather lingering with periods of showers likely, especially in the northern 2/3rds Northern California. There is some uncertainty regarding the timing and strength of such events for the latter half of next week, however. The marine layer along the coast has thickened up somewhat over the past few days and some drizzle at times is possible there over the next few days.

SOUTHERN CALIFORNIA

A ridge of high pressure building into California from the Pacific Ocean will bring a warming and drying trend through Monday. Maximum temperatures will be in the 70s across the mountains and 80s to low 90s in the valleys today. Temperatures will become 10 to 15 degrees above normal by Sunday and Monday. Minimum humidity will be between 12% and 25% away from the coast today and then drop to 8% to 15% Sunday and Monday. Winds will be light across the region through Monday, but they will become offshore Sunday night through Monday morning. A Pacific trough will bring much cooler temperatures and higher humidity Tuesday through the end of next week. The marine layer will become deep by Wednesday morning, with low clouds and fog making it over the lower coastal mountain slopes. There will be strong and gusty south to west winds across the mountain ridges and desert passes Tuesday afternoon through Wednesday evening.
